Question 1

```
bid <- read.table("../data/eBayNumberOfBidderData.dat", header = TRUE)
```

a)

```
poiglm <- glm(nBids ~ . - 1, data = bid, family = poisson(link = "log"))
summary(poiglm)
```

```
##
## Call:
## glm(formula = nBids ~ . - 1, family = poisson(link = "log"),
##      data = bid)
##
## Deviance Residuals:
##      Min       1Q   Median       3Q      Max
## -3.580  -0.722  -0.044   0.527   2.461
##
## Coefficients:
